

## Patient Details

Name : Priti Khanna  
Date of Birth : 1 Jun 1951  
Age : 71 years/Female  
Referred By : Self

## Report Details

Name : Dengue NS1 Antigen with  
Antibodies  
Sampling Received At :  
2023-01-25T00:10:35.084+05:30

Name	Result	Normal Range
NS1 Antigen(-)	negative	negative
Dengue IgM and IgG Antibodies(-)	IgM:Negative,IgG:Negative	IgM:Negative,IgG:Negative

### Authorized By

Dr. Amitabh Bachchan  
MBBS  
Registration Number : 12345678

### Test Methods

1. Lateral Flow  
Immunochromatography

### Notes, Interpretation & Interfering Factors

1. The test does not distinguish between different flaviviruses, and cross reactivity with other flavivirus infections is possible.
2. All positive results should be confirmed by a secondary method.
3. NS1 antigen is positive in the first 5 days of the infection.
4. IgM antibodies are positive in the next 7-10 days of the infection, after which their titres reduce and the titre of IgG antibodies rise.
5. Widal counts do not correlate well with antigen/antibody testing but can be used as an adjunct for diagnosis.

SAMPLE REPORT

This is a sample report, on a dummy patient, signed by a dummy doctor. The actual report format may vary and you are requested not to compare with the same.

1. 'Sample Received At' refers to the date and time of the first sample collection done for a patient, for a given set of tests. In case of subsequent collections(eg in case of Fasting and PP, suppression or stimulation tests) the time may not reflect the actual time of collection.
2. Methods of measurement are mentioned together at the bottom of each report, test units to the right of each test name.All reports are subject to clinical correlation and not intended for forensic purposes.
