### Notes, Interpretation & Interfering Factors

- Potassium results may be affected if the sample is drawn from a arm that has a travelling IV line.
- Serum potassium is slightly higher than plasma potassium - approximately 0.2 - 0.5 mmol/Lt and this difference should be accounted for in cases of suspected borderline hypokalemia.

This is a sample report, on a dummy patient, signed by a dummy doctor. The actual report format may vary and you are requested not to compare with the same.

- 'Sample Received At' refers to the date and time of the first sample collection done for a patient, for a given set of tests. In case of subsequent collections(eg in case of Fasting and PP, suppression or stimulation tests) the time may not reflect the actual time of collection.
- Methods of measurement are mentioned together at the bottom of each report, test units to the right of each test name.All reports are subject to clinical correlation and not intended for forensic purposes.
